

ESHWAR SAI

Frontend Engineer — React / TypeScript / Micro-Frontend Architecture

Bengaluru, Karnataka | +91 6363824367 | eshwarsairam7@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Frontend Engineer with 3 years of experience building enterprise trading and financial platforms in React, TypeScript, and Redux. Specializes in Micro-Frontend and Monorepo architecture using Webpack 5 Module Federation, and in performance optimization (30% load-time reduction via code splitting, lazy loading, and bundle optimization). Currently building IPO investment workflows at Nuvama Wealth, serving CXO, Relationship Manager, Partner, and Client user segments. Experienced with real-time WebSocket data integration for live market and trading data.

TECHNICAL SKILLS

- Frontend: React, Redux, Redux Toolkit, Context API, Zustand, JavaScript (ES6+), TypeScript
- Architecture & Tooling: Micro-Frontend, Module Federation, Monorepo, Webpack 5, GitHub Actions
- Styling: Tailwind CSS, SCSS, Styled Components, MUI, Bootstrap
- Performance: Code Splitting, Lazy Loading, Bundle Optimization, Reusable Component Design
- Other Languages: Java, Python
- Tools: Git, GitHub, Postman, Swagger, Figma, Chrome DevTools

PROFESSIONAL EXPERIENCE

Nuvama Wealth (formerly Edelweiss Wealth Management) — Bengaluru

Software Development Engineer II

Jun 2025 – Present

- Build two React/TypeScript Micro-Frontend applications (NCD-IPO Platform, IPO Platform) within a Module Federation architecture, enabling independent deployment across teams.
- Own end-to-end IPO investment journeys — routing architecture, product bouquet, orderbook, transaction flows, and investment workflows — serving CXO, Relationship Manager, Partner, and Client user segments.
- Design reusable component architecture adopted across both micro-frontend applications to reduce duplicate UI development. [METRIC NEEDED: number of shared components, or dev-hours saved]
- Partner with Product, QA, Design, and Backend teams in Agile sprints to ship investment-platform features on schedule.

Software Engineer

Oct 2024 – May 2025

- Built and maintained real-time WebSocket integrations delivering live market and trading data on the Nuvama Wealth Broking monolithic web platform.
- Improved page load performance by 30% through image optimization, code splitting, and lazy loading.
- Developed scalable, reusable frontend modules for enterprise financial applications, and mentored junior developers on frontend best practices.
- Improved cross-browser compatibility and collaborated with backend teams on API integration for seamless data flow.

Associate Software Engineer

Oct 2023 – Sep 2024

- Built responsive trading dashboards and financial workflows using React, TypeScript, and Redux across APIConnect, the Partners Documentation Portal, and Nuvama Wealth Web & Mobile applications.
- Integrated REST APIs with backend teams to ensure seamless data flow across web and mobile platforms.
- Delivered reusable UI components that improved maintainability across multiple business modules.
- Participated in code reviews, debugging, and performance optimization as part of Agile delivery with Product, QA, and Design stakeholders.

SELECTED PROJECTS

Algo Trading Automation Platform — Live on DigitalOcean

- Built an automated options trading platform for Indian markets with live order execution, deployed on a self-managed DigitalOcean Linux server.
- Implemented strategies driven by Open Interest analysis, option chain snapshots, and positional trading logic.
- Engineered real-time trade execution with stop-loss/target management and broker API integrations.
- Designed a scalable architecture supporting multiple concurrent strategies with retry handling, logging, and live monitoring. [METRIC NEEDED: uptime, number of strategies running concurrently, or trade volume handled]

EDUCATION

Bachelor of Engineering, Mechanical Engineering

Bangalore Institute of Technology (Visvesvaraya Technological University) — CGPA 8.1/10.0 — 2019–2023
